

Insite Technology

For Outdoor Compactors

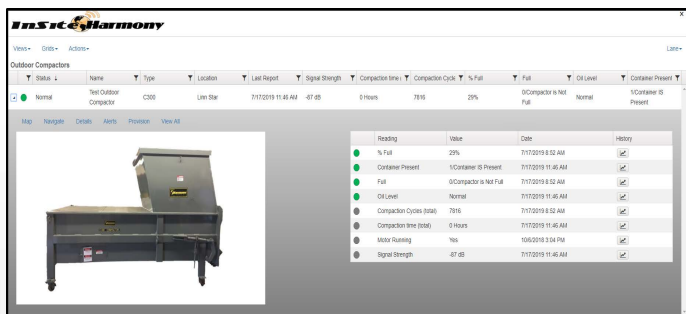

What Is *Insite*?

Harmony's *Insite* Monitoring System provides a Total Solutions Approach to compactor monitoring!

Insite not only monitors container fullness, but it can track the overall health of the compactor, and help with preventive maintenance planning.

How Does *Insite* Work?

Insite Technology for Outdoor Compactors measures the energy used during compaction cycles to determine container fullness. Traditional monitors utilize hydraulic pressure sensors that can provide false readings when hydraulic fluid is cold or when larger waste is placed in the compactor. False monitor readings result in unnecessary pulls and lost revenue.

Easy To Use Cloud Based Dashboard Sends Alerts and Reports To Save You Time & Money!

Harmony's C300 Stationary Compactor

Features Of *Insite* Technology For Outdoor Compactors:

- Can be installed on any make or model of outdoor compactor.
- Utilizes a current sensor to determine accurate fullness levels.
- User friendly cloud-based dashboard that can be used on any smart device.
- Date/time stamp for each compaction cycle.
- Counts total number of compaction cycles.
- Configurable haul orders when the compactor is 50-100% full, so that it is emptied on a "just in time" basis, saving you money, and reducing your carbon footprint.
- Let's you know when container is removed and reconnected and tracks container location.
- Haulers and customers can be contacted via email or SMS text message when the container is full or other alerts are present.
- Allows you to monitor multiple locations at one time.
- Creates valuable reports to help you track data such as total number of compactor cycles, average cycles per day, average weight, average energy used, etc.

Insite is also available on all Indoor Compactors! For information and pricing contact us at sales@harmony1.com today!
